

PALLAPU MANEESH KUMAR

AWS DevOps Engineer | Terraform | Jenkins | Docker | Kubernetes
+91-9390330187 | maneeshkumar5161@gmail.com | [LinkedIn](#) | [GitHub](#) | Bengaluru, India

CORE COMPETENCIES

AWS Cloud Infrastructure | Infrastructure as Code | **Terraform** Automation | **CI/CD** Pipeline Engineering | **GitOps** | **Amazon EKS** | Containerization | DevSecOps | Cloud Monitoring & Observability | Release Engineering | Production Support | Microservices Deployment | High Availability | Cloud Migration

PROFESSIONAL SUMMARY

AWS DevOps Engineer with nearly 3 years of experience building **CI/CD** and **GitOps** pipelines with **Jenkins**, **ArgoCD**, and **Helm**, provisioning **AWS** infrastructure with **Terraform**, and deploying containerized microservices on **Amazon EKS**. Skilled in **Kubernetes** deployments, DevSecOps practices (**SonarQube**, **Trivy**, **AWS Secrets Manager**, **CyberArk**), and cloud monitoring with **Prometheus**, **Grafana**, and **CloudWatch**, with a track record of automating enterprise-scale release, migration, and production-support processes.

KEY ACHIEVEMENTS

- Supported DevOps and platform modernization across 20+ enterprise environments for a large-scale financial and insurance platform.
- Built and maintained 20+ **Jenkins CI/CD** pipelines automating build, validation, deployment, rollback, and release workflows.
- Migrated 50,000+ production application modules from a legacy version-control platform to **GitHub**, establishing repository governance and branching standards.
- Reduced **DB2** migration execution time from approximately 3 hours to under 5 minutes through **Shell Scripting** automation.
- Contributed to migration from a legacy 2-tier architecture to a highly available 3-tier architecture, supporting environment provisioning and deployment processes.

TECHNICAL SKILLS

Cloud: **AWS** (EC2, VPC, IAM, S3, Route53, RDS, EKS, ELB/ALB, Security Groups, Secrets Manager, CloudWatch, DynamoDB), Microsoft Azure

Infrastructure as Code: **Terraform** (Modules, Remote State, S3 Backend, DynamoDB State Locking, Workspaces, plan/apply), **Ansible**

CI/CD & GitOps: **Jenkins**, **ArgoCD**, Git, **GitHub**, **GitOps** Delivery Flow (**Jenkins** builds & pushes container image → updates deployment repository → **ArgoCD** syncs deployment repository to **Amazon EKS**)

Containers & Orchestration: **Docker**, **Docker Swarm**, **Kubernetes** (Deployments, Pods, Services, ConfigMaps, Secrets, Ingress, HPA, Rolling Updates, **Probes**, Resource Requests/Limits, Self-Healing), **Amazon EKS**, **Helm**, Kops, **NGINX Ingress Controller**

Monitoring & Observability: **Prometheus**, **Grafana**, **New Relic**, **CloudWatch**

DevSecOps: **SonarQube** code-quality gates, **Trivy** container vulnerability scanning, **AWS Secrets Manager**, **CyberArk** privileged credential management

Operating Systems: Linux, Windows, AIX

Scripting: **Shell Scripting**, Python

Databases: **DB2**, SQL, MySQL

Enterprise Technologies: WebSphere Application Server (WAS), COBOL, CICS, CTG

PROFESSIONAL EXPERIENCE

Associate - DevOps Engineer, Cognizant Technology Solutions
Bengaluru, India

Oct 2023 - Present

Supported modernization of a large-scale financial and insurance platform across 20+ enterprise environments, most recently on a cloud-native **GitOps** microservices project on **AWS** for 8 months, preceded by enterprise **CI/CD** automation.

Cloud-Native Application Platform & GitOps Implementation - AWS | EKS (Jan 2026 - Present)

Technologies: AWS, Terraform, Jenkins, ArgoCD, Docker, Kubernetes, Helm, Prometheus, Grafana

- Built **Jenkins CI/CD** pipelines automating source-code checkout, build validation, **SonarQube** quality analysis, **Trivy** image scanning, **Docker** image creation, and deployment workflows.
- Implemented **GitOps**-based Continuous Delivery: **Jenkins** built and pushed container images and updated a dedicated deployment repository, which **ArgoCD** continuously synchronized to **Amazon EKS** using **Helm**.
- Integrated **AWS Secrets Manager** for secure storage and retrieval of application credentials and sensitive configuration data.
- Provisioned **AWS** infrastructure using **Terraform**, using **Terraform workspaces** for environment-specific configurations and **terraform plan/apply** for controlled infrastructure changes; developed reusable, modular **Terraform** configurations with remote state management via Amazon **S3** and **DynamoDB**-based state locking to support collaborative, standardized infrastructure deployments.
- Containerized and deployed microservices on **Amazon EKS** using Deployments, Services, ConfigMaps, Secrets, **Helm** Charts, and **NGINX Ingress Controller**.
- Configured **Horizontal Pod Autoscaler (HPA)**, rolling updates, liveness/readiness **Probes**, resource requests/limits, and **Kubernetes** self-healing mechanisms to improve application scalability, stability, and availability.
- Implemented monitoring and observability using **Prometheus** and **Grafana** dashboards for cluster health, infrastructure metrics, application performance, CPU utilization, and memory consumption.
- Troubleshooted **Kubernetes** and **AWS** issues including CrashLoopBackOff, CreateContainerConfigError, security group misconfigurations, Ingress routing issues, ConfigMap and Secret configuration errors, **RDS** connectivity issues, and inter-service communication failures.

Enterprise Platform Modernization - CI/CD & Automation (Oct 2023 - Dec 2025)

- Designed and maintained 20+ **Jenkins CI/CD** pipelines for application compilation, deployment, release validation, rollback support, and environment-specific workflows.
- Utilized **Docker**-based build environments within **Jenkins** pipelines for dependency isolation and artifact generation, ensuring consistent, reproducible builds.
- Integrated **GitHub**, **SonarQube**, **Nexus Repository Manager**, and enterprise deployment processes into **CI/CD** pipelines to improve code quality, deployment reliability, and artifact traceability.
- Led migration of 50,000+ production application modules from a legacy version-control platform to **GitHub**, establishing repository governance and branching standards.
- Developed **Shell-based** automation that reduced **DB2** migration time from ~3 hours to under 5 minutes, and automated broader deployment/operational activities to cut manual effort across environments.
- Contributed to migration from a legacy 2-tier to a highly available 3-tier architecture, supporting environment provisioning and deployment processes.
- Implemented monitoring and health checks using **New Relic** to improve system visibility and reliability, and supported production release cycles with deployment validation, troubleshooting, log analysis, and rollback support.
- Retrieved and managed privileged credentials using **CyberArk** for secure system access, and used **ServiceNow** for incident, change, and ticketing management.

CERTIFICATIONS

- **AWS** Certified Cloud Practitioner (CLF-C02)
- DevOps Certification - Udemy
- Cloud Computing Certification - Udemy

EDUCATION

Bachelor of Technology, Electronics & Communication Engineering

Kalasalingam Academy of Research and Education | CGPA: 8.3 / 10
