

Pallapu Maneesh Kumar

Infrastructure & DevOps Engineer

Phone: +91-9390330187 | Email: maneeshkumar5161@gmail.com

Professional Summary

Infrastructure & DevOps Engineer with nearly 3 years of experience supporting and modernizing enterprise financial systems. Experienced in CI/CD automation, release engineering, GitHub migration, build and deployment automation, Linux environments, infrastructure modernization initiatives, AWS, Terraform, Docker, Kubernetes, Jenkins and JFrog.

Technical Skills

AWS, Terraform, Docker, Kubernetes, EKS, Helm, Jenkins, GitHub, JFrog, Linux, Shell Scripting, Python, Prometheus, Grafana, CloudWatch, DB2, SQL, CI/CD, ArgoCD

Professional Experience

Cognizant Technology Solutions - Programmer Analyst | Infrastructure & DevOps Engineer
Oct 2023 - Present, Bengaluru

- Contributed to modernization of a business-critical financial and insurance platform built on COBOL, CICS, DB2, CTG and IBM WebSphere Application Server (WAS).
- Modernized build and deployment processes across 20+ Test, UAT, Pre-Production and Production-aligned environments, standardizing release workflows.
- Participated in transformation of the application landscape into a highly available 3-tier architecture with separate Database, Middleware and Application layers.
- Supported implementation of redundant DB2, Middleware and WebSphere environments with load balancing and high-availability configurations.
- Designed and implemented Jenkins pipelines for selective COBOL/CICS compilation, mass compilation and deployment automation.
- Automated DB2 BIND and DDL execution processes through CI/CD pipelines, reducing manual deployment effort and improving consistency.
- Automated WebSphere deployment workflows including ANT-based builds, artifact generation, packaging and deployment activities.
- Implemented JFrog Artifactory for centralized artifact management and release workflows.
- Played a key role in migrating source code from a legacy version-control platform to GitHub, including repository creation, branching strategy design, merge workflows and production code migration.
- Contributed to platform modernization initiatives involving Docker containerization efforts and Terraform-based Infrastructure as Code adoption.
- Collaborated with development, middleware, database and infrastructure teams for releases, troubleshooting and production support activities.

DevOps Project

Cloud-Native Microservices Platform on AWS: Built microservices deployment platform using AWS, Terraform, Docker, Kubernetes, Jenkins, Helm, Prometheus and Grafana. Automated CI/CD workflows, security scanning, image builds and Kubernetes deployments.

Education

B.Tech - Electronics & Communication Engineering, Kalasalingam Academy of Research and Education (2019-2023), CGPA: 8.3
