

PALLAPU MANEESH KUMAR

AWS DevOps Engineer | Terraform | Jenkins | Docker | Kubernetes

+91-9390330187 | maneeshkumar5161@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

DevOps Engineer with nearly 3 years of experience designing and provisioning **AWS** infrastructure using **Terraform**, building **CI/CD** and **GitOps** pipelines with **Jenkins**, **ArgoCD**, and **Helm**, and deploying containerized microservices on **Amazon EKS**. Hands-on with **AWS** core services (**EC2**, **VPC**, **IAM**, **S3**, **Route53**, **RDS**), **Docker**, **Kubernetes**, and monitoring with **Prometheus**, **Grafana**, and **CloudWatch**. Experienced in securing infrastructure with **AWS Secrets Manager** and **CyberArk**, and in supporting enterprise-scale platform modernization, **CI/CD** automation, and release engineering.

TECHNICAL SKILLS

Cloud	AWS (EC2, IAM, VPC, S3, Route53, RDS, EKS, Load Balancer, Secrets Manager), Microsoft Azure
Infrastructure as Code	Terraform, Ansible
CI/CD & GitOps	Jenkins, ArgoCD, Git, GitHub
Containers & Orchestration	Docker, Docker Swarm, Kubernetes, Amazon EKS, Helm, Kops, NGINX Ingress Controller
Monitoring & Observability	Prometheus, Grafana, New Relic, CloudWatch
Security & DevSecOps	AWS Secrets Manager, CyberArk, SonarQube, Trivy
Artifact Management	JFrog Artifactory, Nexus Repository Manager
Operating Systems	Linux, Windows, AIX
Scripting	Shell Scripting, Python
Databases	DB2, SQL, MySQL
Enterprise Technologies	WebSphere Application Server (WAS), COBOL, CICS, CTG

PROFESSIONAL EXPERIENCE

Associate – DevOps Engineer — Cognizant Technology Solutions Oct 2023 – Present | Bengaluru, India

Supported modernization of a large-scale financial and insurance platform across 20+ enterprise environments — most recently on a cloud-native **GitOps** microservices project on **AWS** for 8 months, preceded by enterprise **CI/CD** automation.

Cloud-Native Application Platform & GitOps Implementation — AWS | EKS (Jan 2026 – Present)

AWS | Terraform | Jenkins | ArgoCD | Docker | Kubernetes | Helm | Prometheus | Grafana

- Built **Jenkins** **CI/CD** pipelines automating source-code checkout, build validation, **SonarQube** quality analysis, **Trivy** image scanning, **Docker** image creation, and deployment workflows.
- Implemented **GitOps**-based Continuous Delivery using **Jenkins**, **Helm**, and **ArgoCD**.
- Integrated **AWS Secrets Manager** for secure storage and retrieval of application credentials and sensitive configuration data.
- Architected and provisioned **AWS** infrastructure using **Terraform** — including **VPCs**, **EC2** instances, **IAM** roles, security groups, and networking resources — and developed reusable, modular **Terraform** configurations with remote state management via **Amazon S3** and **DynamoDB**-based state locking to support collaborative, standardized infrastructure deployments.
- Containerized and deployed microservices on **Amazon EKS** using Deployments, Services, ConfigMaps, Secrets, **Helm** Charts, and **NGINX Ingress Controller**.
- Configured **Horizontal Pod Autoscaler (HPA)**, rolling updates, and **Kubernetes** self-healing mechanisms to improve application scalability and availability.
- Implemented monitoring and observability using **Prometheus** and **Grafana** dashboards for cluster health, infrastructure metrics, application performance, CPU utilization, and memory consumption.
- Troubleshooted **Kubernetes** and **AWS** issues including **CrashLoopBackOff**, **CreateContainerConfigError**, **Security Group** misconfigurations, **Ingress** routing issues, **ConfigMap** and **Secret** configuration errors, **RDS** connectivity issues, and inter-service communication failures.

Enterprise Platform Modernization — CI/CD & Automation (Oct 2023 – Dec 2025)

- Designed, developed, and maintained 20+ **Jenkins** **CI/CD** pipelines automating application compilation, deployment, release validation, rollback support, and environment-specific workflows.
- Utilized **Docker**-based build environments within **Jenkins** pipelines for application compilation, dependency isolation, and artifact generation, ensuring consistent and reproducible builds.

- Integrated **GitHub**, **SonarQube**, **Nexus Repository Manager**, and enterprise deployment processes into **CI/CD** pipelines to improve code quality, deployment reliability, and artifact traceability.
- Led migration of more than 50,000 production application modules from a legacy version-control platform to **GitHub**, establishing repository governance, branching strategies, onboarding standards, and source-control best practices.
- Developed Shell-based automation solutions that reduced **DB2** migration activities from approximately 3 hours to less than 5 minutes, improving release efficiency and reducing deployment risk.
- Automated deployment and operational activities using Shell scripting, significantly reducing manual effort and improving deployment consistency across environments.
- Contributed to migration from a legacy 2-tier architecture to a highly available 3-tier architecture by supporting environment provisioning, deployment processes, and infrastructure modernization activities.
- Implemented monitoring and operational health checks using **New Relic** and automated scripting solutions to improve system visibility and reliability.
- Supported enterprise production release cycles by performing deployment validation, troubleshooting, log analysis, rollback support, and production readiness reviews.
- Retrieved and managed privileged credentials using **CyberArk** for secure access to enterprise systems, and used ServiceNow for day-to-day incident, change, and ticketing management activities.

CERTIFICATIONS

- **AWS** Certified Cloud Practitioner (CLF-C02)
- DevOps Certification — Udemy
- Cloud Computing Certification — Udemy

EDUCATION

Bachelor of Technology, Electronics & Communication Engineering — Kalasalingam Academy of Research and Education
CGPA: 8.3 / 10
