PALLAPU MANEESH KUMAR

AWS DevOps Engineer | Terraform | Jenkins | Docker | Kubernetes (EKS) | GitOps

+91-9390330187 | maneeshkumar5161@gmail.com | LinkedIn | GitHub | Bengaluru, India

CORE COMPETENCIES

AWS Cloud Infrastructure | Infrastructure as Code (Terraform) | CI/CD Pipeline Engineering | GitOps (ArgoCD, Helm) | Amazon EKS | Containerization | DevSecOps | Monitoring & Observability | Python & Shell Automation | Release Engineering | Production Support | Microservices Deployment

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 3 years of experience in **CI/CD automation**, **AWS infrastructure provisioning**, and cloud-native application delivery for a large financial and insurance platform. Hands-on with **Terraform** (modules, workspaces, S3 remote state with DynamoDB locking), **Jenkins**, **Docker**, **Amazon EKS**, and **GitOps** using **ArgoCD** and **Helm**. Proven track record in large-scale migrations, Shell and Python automation, production support, and incident troubleshooting across **20+ enterprise environments**. AWS Certified Cloud Practitioner.

KEY ACHIEVEMENTS

- Migrated **50,000+ production application modules** from **PVCS** to **GitHub**, enabling concurrent development and cutting the **SDLC cycle from 4 weeks to 3 weeks (~25%)**.
- Automated a **62-table DB2 sync** across test regions with **Shell scripting**, cutting a ~2.5-hour manual process to **under 5 minutes (~97%)**.
- Re-architected a 2-tier enterprise platform into a **3-tier design** with a dedicated database server, eliminating batch-window server crashes that disrupted **20+ nightly DB2 backups**.
- Built and maintained **20+ Jenkins CI/CD pipelines** automating build, validation, deployment, rollback, and release workflows.
- Built **Python health and service dashboards** for every server in the enterprise application environment, giving teams one place to check system health.
- Delivered a **GitOps-based microservices platform on AWS** using Terraform, Jenkins, ArgoCD, Helm, and Amazon EKS.

TECHNICAL SKILLS

- **Cloud:** AWS (EC2, VPC, IAM, S3, RDS, EKS, ALB, Route 53, Secrets Manager, CloudWatch), Azure (Basics)
- **IaC:** Terraform (Modules, Workspaces, Remote State, S3 Backend, DynamoDB State Locking), Ansible
- **CI/CD & GitOps:** Jenkins, Git, GitHub, ArgoCD, Helm, Nexus Repository Manager, PVCS (Legacy VCS Migration)
- **Containers & Orchestration:** Docker, Kubernetes, Amazon EKS, NGINX Ingress Controller
- **Monitoring & Observability:** Prometheus, Grafana, CloudWatch, New Relic
- **DevSecOps:** SonarQube, Trivy, CyberArk
- **Scripting & Automation:** Shell Scripting, Python (JSON-based monitoring dashboards)
- **OS / Databases:** Linux, AIX, DB2, SQL, MySQL
- **Additional Technologies:** WebSphere Application Server, COBOL, CICS, CTG, ServiceNow

PROFESSIONAL EXPERIENCE

Associate - DevOps Engineer, Cognizant Technology Solutions **Oct 2023 – Present**

Bengaluru, India

Supported modernization of a large-scale financial and insurance platform across **20+ enterprise environments**, most recently on a cloud-native **GitOps** microservices project on **AWS**.

Cloud-Native Application Platform & GitOps Implementation — AWS | EKS (Jan 2026 – Present)

- Provisioned **AWS infrastructure** with **Terraform** using reusable modules, workspaces, and remote state in **Amazon S3** with **DynamoDB** state locking, enabling consistent, repeatable environments.
- Built **Jenkins CI/CD pipelines** automating source checkout, build validation, **SonarQube** quality analysis, **Trivy** image scanning, **Docker** image creation, and deployment.
- Implemented **GitOps**-based continuous delivery with **Jenkins**, **ArgoCD**, **Helm**, and **Amazon EKS**.
- Containerized and deployed microservices on **Amazon EKS** using Deployments, Services, ConfigMaps, Secrets, and **NGINX Ingress Controller**; configured **HPA**, rolling updates, probes, and resource requests/limits.
- Secured application credentials with **AWS Secrets Manager** and monitored cluster health, CPU, and memory using **Prometheus**, **Grafana**, and **CloudWatch**.
- Troubleshot production issues across **Kubernetes** and **AWS**, including CrashLoopBackOff, CreateContainerConfigError, Ingress routing failures, **security group** misconfigurations, ConfigMap/Secret errors, **RDS** connectivity issues, and inter-service communication failures.

Legacy Banking & Finance Infrastructure / DevOps Project (Oct 2023 – Dec 2025)

- Led migration of **50,000+ production application modules** from **PVCS Version Manager** to **GitHub**, replacing PVCS's file-locking model with branching and pull requests so multiple developers could work on the same file simultaneously, reducing the **SDLC cycle from 4 weeks to 3 weeks (~25%)**; established repository governance and branching standards.
- Designed and maintained **20+ Jenkins CI/CD pipelines** for application compilation, deployment, release validation, and rollback, using **Docker**-based build environments for dependency isolation and artifact generation.
- Integrated **Nexus Repository Manager** and **GitHub** into CI/CD pipelines to strengthen code quality gates and artifact traceability.
- Designed a **Shell**-based automation to synchronize **62 DB2 tables** across test regions, validating table structures between source and target, exporting region-specific DEL files, and importing them into the destination, reducing execution time from ~2.5 hours of manual effort to **under 5 minutes (~97%)**.
- Led redesign from a legacy 2-tier architecture to a **3-tier architecture** with dedicated presentation, application, and database servers, eliminating memory-spike outages caused by concurrent evening batch jobs and **20+ scheduled DB2 backups**, and restoring uninterrupted backups, DDL changes, and restores.
- Developed **Python**-based health and service dashboards for every server in the enterprise application environment, parsing JSON status data and generating HTML pages served over a dedicated port, so teams could check server and service health without logging into each machine.
- Implemented monitoring and health checks using **New Relic**; supported production release cycles with deployment validation, log analysis, and rollback; managed privileged credentials with **CyberArk**; tracked incidents and changes in **ServiceNow**.

CERTIFICATIONS

- **AWS Certified Cloud Practitioner (CLF-C02)**
- **DevOps Certification** — Udemy
- **Cloud Computing Certification** — Udemy

EDUCATION

Bachelor of Technology, Electronics & Communication Engineering
Kalasalingam Academy of Research and Education | CGPA: 8.3 / 10
