

PALLAPU MANEESH KUMAR

DevOps Engineer — AWS — CI/CD — Jenkins — Terraform — Docker — Kubernetes

+91-9390330187 — maneeshkumar5161@gmail.com — LinkedIn — GitHub

Professional Summary

DevOps Engineer with nearly 3 years of experience in CI/CD automation, deployment automation, release engineering, source-control modernization, and enterprise platform modernization. Experienced in designing and maintaining Jenkins pipelines, managing GitHub repositories, implementing SonarQube quality validations, Nexus artifact management, Linux automation, monitoring, and production release activities. Proven ability to streamline software delivery, automate manual processes, improve deployment reliability, and support enterprise modernization initiatives. Hands-on experience with AWS, Terraform, Docker, Kubernetes, Helm, and cloud-native deployment platforms through independent projects and modernization efforts.

Technical Skills

Cloud	AWS (EC2, IAM, VPC, S3), Microsoft Azure
CI/CD	Jenkins, GitHub, Git, Nexus Repository Manager, SonarQube
Containers	Docker, Kubernetes, Amazon EKS, KOPS, Helm
Infrastructure as Code	Terraform
Monitoring	New Relic, Prometheus, Grafana
Scripting	Shell Scripting, Python
Operating Systems	Linux
Databases	DB2, SQL

Professional Experience

Cognizant Technology Solutions

Oct 2023 – Present

Associate – DevOps Engineer

Bengaluru, India

- Designed and maintained 20+ Jenkins CI/CD pipelines automating build, deployment, validation, rollback, and release workflows across multiple enterprise environments.
- Integrated SonarQube-based static code analysis and Quality Gate validations into CI/CD processes to improve code quality and release compliance.
- Implemented artifact management and deployment processes using Nexus Repository Manager, enabling version-controlled releases and rollback capabilities.
- Automated deployment and operational activities using Shell scripting, reducing manual effort and improving release efficiency across environments.
- Led migration of 50,000+ application modules from a legacy version-control platform to GitHub, establishing repository governance, branching standards, and onboarding practices.
- Developed automation solutions that reduced a critical deployment and migration activity from approximately 3 hours to under 5 minutes.
- Participated in scheduled production release cycles, executing build, deployment, validation, troubleshooting, and rollback procedures in collaboration with cross-functional teams.
- Implemented monitoring and operational health checks using New Relic, Shell scripts, and scheduled automation jobs to improve visibility and system reliability.
- Contributed to Infrastructure-as-Code adoption using Terraform and participated in Docker-based application modernization initiatives.
- Contributed to modernization of a large-scale enterprise platform by supporting migration from a legacy 2-tier architecture to a highly available 3-tier architecture, improving scalability, resilience, and operational reliability.

Projects

Cloud-Native Application Deployment Platform

AWS — Terraform — Jenkins — Docker — Kubernetes (EKS & KOPS) — Helm — Prometheus — Grafana

- Architected and provisioned a cloud-native 5-service application on AWS using Terraform, automating VPC, EC2, IAM roles, security groups, and networking resources through Infrastructure as Code (IaC).
- Built end-to-end Jenkins CI/CD pipelines automating source code checkout, build validation, SonarQube analysis, Trivy vulnerability scanning, Docker image creation, and Kubernetes deployments.

- Containerized and deployed five microservices on Kubernetes using Helm charts, implementing NGINX Ingress for host-based routing through a unified entry point.
- Configured Horizontal Pod Autoscaler (HPA), rolling updates, and Kubernetes self-healing mechanisms to improve application availability, scalability, and deployment reliability.
- Implemented observability using Prometheus and Grafana dashboards to monitor cluster health, application performance, resource utilization, and infrastructure metrics.
- Applied Git-based branching strategies and release workflows to simulate production-grade deployment and DevOps practices.

Education

Bachelor of Technology – Electronics & Communication Engineering

Kalasalingam Academy of Research and Education, Madurai

CGPA: 8.3

Certifications

- AWS Certified Cloud Practitioner
- DevOps Certification – Udemy
- Cloud Computing Certification – Udemy

Additional Information

- Published technical blogs on AWS and DevOps best practices.
- Coordinator for SparkZ annual techno-cultural fest.
