

PALLAPU MANEESH KUMAR

+91-9390330187 maneeshkumar5161@gmail.com [LinkedIn](#) [Github](#)

Professional Summary

Infrastructure & DevOps Engineer with nearly 3 years of experience supporting and modernizing large-scale financial and insurance platforms. Experienced in CI/CD automation, release engineering, Jenkins pipeline development, GitHub migration, JFrog Artifactory, infrastructure modernization, DB2 deployment automation, Linux administration, monitoring, and shell scripting. Contributed to enterprise transformation initiatives including 3-tier architecture modernization, Docker containerization, Terraform adoption, and source-control modernization. Hands-on experience with AWS, Kubernetes, Docker, Terraform, Jenkins, GitHub, New Relic, and DevOps automation practices.

Skills & Abilities

Cloud : AWS (EC2, IAM, VPC, S3), Azure
CI/CD : Jenkins, ArgoCD

Containers : Docker
Orchestration : Kubernetes, EKS, Helm, Kops
Artifact Repository : JFrog Artifactory
Middleware : WebSphere, CTG, CICS

Infrastructure as Code : Terraform, Ansible
Monitoring : New Relic, Prometheus, Grafana, Cloud-Watch
Version Control : Git, GitHub
Databases : DB2, SQL
Programming : Shell Scripting, Python
Enterprise Technologies : COBOL, DB2, WAS

Work Experience

Cognizant Technology Solutions

Programmer Analyst — Infrastructure & DevOps Engineer

Oct 2023 – Present

Bengaluru, Karnataka

- Contributed to modernization of a large-scale financial and insurance platform supporting policy generation and servicing across 20+ Test, UAT, Pre-Production, and Production-aligned environments.
- Participated in transforming a legacy 2-tier architecture into a highly available 3-tier architecture by separating Database (DB2), Middleware (COBOL/CICS/CTG), and Application (WAS) layers.
- Implemented high-availability configurations using redundant DB2, Middleware, and WebSphere environments with load balancing, failover support, fault tolerance, and zero single point of failure.
- Designed and maintained 20+ Jenkins CI/CD pipelines automating COBOL/CICS compilation, selective module deployments, mass compilation activities, and release validation workflows.
- Automated deployment workflows for DB2 BIND, DDL execution, migration activities, and environment-specific release processes, reducing manual effort and deployment risk.
- Designed CI workflows that compile application modules on dedicated build environments, package validated binaries, and publish release artifacts into JFrog Artifactory.
- Implemented CD pipelines that retrieve approved artifacts from JFrog repositories and deploy them across target environments while enabling rollback support and release traceability.
- Automated WebSphere deployment workflows including ANT-based builds, JAR generation, EAR packaging, deployment validation, and release automation activities.
- Led migration of more than 50,000 production modules from a legacy Version Manager platform to GitHub, including repository creation, branching strategy design, merge workflows, and production code migration.
- Created GitHub governance standards, onboarding documentation, and conducted knowledge-transfer sessions for development teams to standardize source-control practices.
- Developed Shell-based automation solutions that reduced DB2 migration activities from approximately 3 hours to 5 minutes.
- Created Shell scripts and Cron-based jobs to monitor filesystem utilization, track operational metrics, and generate automated email alerts.
- Utilized New Relic to analyze CPU utilization, memory consumption, long-running batch workloads, and execution trends to optimize workload scheduling and resource utilization.
- Supported enterprise release activities including build validation, deployment verification, log analysis, rollback support, production readiness reviews, and troubleshooting.
- Performed DB2 operational support activities including backup validation, restore testing, deployment troubleshooting, and environment verification.
- Participated in migration initiatives from IBM AIX environments to Linux-based Microsoft Azure infrastructure as part of enterprise modernization efforts.
- Provisioned and validated new enterprise application regions consisting of DB2, COBOL, CICS, CTG, and WebSphere components for multiple business products.
- Contributed to ongoing platform modernization initiatives involving Docker-based containerization of WebSphere workloads and adoption of Terraform Infrastructure-as-Code practices.

Education

Kalasalingam Academy of Research and Education, Madurai

Bachelor of Technology in Electronics & Communication Engineering

Aug 2019 – May 2023

CGPA: 8.3

Projects

Cloud Native Microservices Deployment Platform | AWS, Terraform, Docker, Kubernetes, Jenkins, Helm

- Designed and deployed a cloud-native microservices platform consisting of User, Product, Order, Payment and Frontend services on AWS infrastructure.
- Provisioned AWS resources including VPC, EC2 instances, Security Groups, IAM roles and networking components using Terraform following Infrastructure-as-Code principles.
- Built end-to-end Jenkins CI/CD pipelines automating source-code checkout, build validation, Docker image creation, security scanning and Kubernetes deployment workflows.
- Containerized microservices using Docker and deployed workloads on Kubernetes using Deployments, Services, ConfigMaps, Secrets and Helm charts.
- Implemented Kubernetes Ingress-based traffic routing, rolling updates, self-healing capabilities and Horizontal Pod Autoscaling (HPA) to support availability and scalability requirements.
- Integrated SonarQube and Trivy into deployment pipelines for static code analysis and container image vulnerability scanning.
- Implemented observability solution using Prometheus and Grafana dashboards to monitor application health, CPU utilization, memory consumption and Kubernetes cluster metrics.
- Applied Git-based branching workflows and release strategies to simulate production-ready deployment and release management practices.

Certifications

- **AWS Certified Cloud Practitioner-Foundational**
- **Certificate by Udemy in DevOps**
- **Certificate by Udemy in Cloud**

Other Accomplishments

- **Published technical blogs on Medium about AWS and DevOps tools best practices.**
- **Co-Ordinator for SparkZ an annual mega techno cultural fest in our college.**
