PALLAPU MANEESH KUMAR

AWS DevOps Engineer | Terraform | Jenkins | Kubernetes (EKS) | GitOps

+91-9390330187 | maneeshkumar5161@gmail.com | LinkedIn | GitHub | Bengaluru, India | **Notice Period:** 30 days

PROFESSIONAL SUMMARY

DevOps Engineer with 3 years of experience in CI/CD automation, release engineering, production support and AWS infrastructure for a large financial and insurance platform across 20+ enterprise environments. Hands-on with **Terraform, Jenkins, Docker, Amazon EKS and GitOps (ArgoCD, Helm)**, with working exposure to Azure. Cut the SDLC cycle by 25% (4 weeks to 3) and reduced a ~2.5-hour manual process to under 5 minutes (~97%). AWS Certified Cloud Practitioner.

TECHNICAL SKILLS

- **Cloud & IaC:** AWS (EC2, VPC, IAM, S3, RDS, EKS, ALB, Route 53, Secrets Manager, CloudWatch), Terraform (modules, workspaces, S3 backend, DynamoDB locking), Ansible, Azure (VNet, VMs, Blob Storage, Load Balancer)
- **Containers & GitOps:** Docker, Kubernetes, Amazon EKS, Helm, ArgoCD, NGINX Ingress Controller
- **CI/CD & DevSecOps:** Jenkins, Git, GitHub, Nexus, SonarQube, Trivy, CyberArk
- **Monitoring & Scripting:** Prometheus, Grafana, CloudWatch, New Relic | Shell, Python
- **Middleware, OS & Databases:** IBM HTTP Server (IHS), WebSphere (WAS), Linux, DB2, SQL, MySQL, ServiceNow

PROFESSIONAL EXPERIENCE

Associate - DevOps Engineer, Cognizant Technology Solutions **Oct 2023 – Present**

*Bengaluru, India | DevOps for a large financial and insurance platform across **20+ enterprise environments***

Cloud & Infrastructure — AWS | Terraform | EKS | 3-Tier Architecture

- Provisioned AWS infrastructure with Terraform (reusable modules, workspaces, S3 remote state with DynamoDB locking) for consistent, repeatable environments.
- Deployed 6 microservices on Amazon EKS across 4 environments (dev, test, UAT, pre-prod) using Deployments, Services, ConfigMaps, Secrets and NGINX Ingress; configured HPA, rolling updates, probes and resource limits.
- Re-architected a 2-tier platform into a 3-tier design (ALB → IHS reverse proxy → two WebSphere layers → dedicated DB server): created the ALB, configured the IHS reverse proxy, configured the application on the clustered middleware, and validated connectivity through the external load balancer. Eliminated batch-window crashes that disrupted 20+ nightly DB2 backups.
- Troubleshot production issues across web, application and database tiers and across Kubernetes and AWS: network breaks, build failures, data issues between layers, CrashLoopBackOff, Ingress routing, security groups and RDS connectivity.
- Secured credentials with AWS Secrets Manager; monitored clusters with Prometheus, Grafana and CloudWatch.
- Used Azure (VNet, VMs, Blob Storage, Load Balancer) on the legacy platform: stored installable packages in Blob Storage and placed a load balancer in front of the web layer.

CI/CD, GitOps & Release Management — Jenkins | ArgoCD | Helm | GitHub

- Designed and maintained **20+ Jenkins CI/CD pipelines** for build, deployment, validation and rollback using Docker-based build environments; integrated SonarQube, Trivy and Nexus for quality gates, image scanning and artifact traceability.
- Implemented GitOps delivery with Jenkins, ArgoCD, Helm and EKS, giving fully automated, zero-manual-step deployments across 4 environments.
- Led migration of **50,000+ production modules from PVCS to GitHub**, replacing file-locking with branching and pull requests so developers could work concurrently; cut the SDLC cycle from 4 weeks to 3 (~25%) and set repository governance and branching standards.
- Fixed Jenkins production issues (Docker or SonarQube unreachable, failed builds and deployments) quickly so releases were not blocked.

Automation, Monitoring & Production Support — Shell | Python | New Relic

- Built a Shell automation to sync 62 DB2 tables across test regions (structure validation, region-specific DEL export/import), cutting a ~2.5-hour manual process to **under 5 minutes (~97%)**.
- Developed Python health and service dashboards for every server (JSON status data to HTML pages) so teams can check health without logging into each machine.
- Managed production releases with deployment validation, New Relic monitoring, log analysis and rollback; handled Linux administration, incident management and root cause analysis; used CyberArk for credentials and ServiceNow for incidents.

CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02)

EDUCATION

B.Tech, Electronics & Communication Engineering — Kalasalingam Academy of Research and Education | CGPA: 8.3 / 10
