PALLAPU MANEESH KUMAR

AWS DevOps Engineer | Terraform | Jenkins | Kubernetes (EKS) | GitOps | Azure

+91-8247739849 | maneeshpallapu62@gmail.com | LinkedIn | GitHub | Bengaluru, India | **Notice Period:** 30 days

PROFESSIONAL SUMMARY

DevOps Engineer with 3 years of experience in **CI/CD automation**, release engineering, production support, and **AWS cloud infrastructure** (with working exposure to Azure) for a large financial and insurance platform. Hands-on with **Terraform**, **Jenkins**, **Docker**, **Amazon EKS**, and GitOps using **ArgoCD** and **Helm**. Results: **SDLC cycle cut 25% (4 weeks to 3 weeks)**, a manual process cut **97% (~2.5 hours to under 5 minutes)**, **20+ Jenkins pipelines** across **20+ enterprise environments**. AWS Certified Cloud Practitioner.

TECHNICAL SKILLS

- **Cloud & IaC:** AWS (EC2, VPC, IAM, S3, RDS, EKS, ALB, Route 53, Secrets Manager, CloudWatch), Terraform (Modules, Workspaces, S3 Backend, DynamoDB Locking), Ansible, Azure (VNet, VMs, Blob Storage, Resource Groups, Load Balancer)
- **Containers & GitOps:** Docker, Kubernetes, Amazon EKS, Helm, ArgoCD, NGINX Ingress Controller
- **CI/CD & DevSecOps:** Jenkins, Git, GitHub, Nexus, SonarQube, Trivy, CyberArk
- **Monitoring:** Prometheus, Grafana, CloudWatch, New Relic | **Scripting:** Shell, Python
- **OS / Databases / Other:** Linux, DB2, SQL, MySQL, WebSphere, ServiceNow

PROFESSIONAL EXPERIENCE

Associate - DevOps Engineer, Cognizant Technology Solutions **Oct 2023 – Present**

*Bengaluru, India | DevOps for a large financial and insurance platform across **20+ enterprise environments***

Cloud & Infrastructure — AWS | Terraform | EKS

- Provisioned AWS infrastructure with **Terraform** (reusable modules, workspaces, **S3 remote state with DynamoDB locking**) and used **S3** for state files and backups, for consistent, repeatable environments.
- Containerized and deployed **6 microservices** on **Amazon EKS** across **4 environments (dev, test, UAT, pre-prod)** using Deployments, Services, ConfigMaps, Secrets, and **NGINX Ingress**; configured **HPA**, rolling updates, probes, and resource limits.
- Worked with **Azure** services (VNet, VMs, Resource Groups, **Blob Storage**, **Azure Load Balancer**) on the legacy enterprise platform: stored installable packages in Blob Storage and placed a load balancer in front of the web layer.
- Secured credentials with **AWS Secrets Manager**; monitored clusters with **Prometheus**, **Grafana**, and **CloudWatch**.
- Troubleshot Jenkins-to-EKS deployment failures and production issues across **Kubernetes** and **AWS** (CrashLoopBackOff, Ingress routing, **security groups**, **RDS** connectivity, inter-service failures).
- Re-architected a 2-tier platform into a **3-tier design** with a dedicated database server, eliminating batch-window crashes that disrupted **20+ nightly DB2 backups**.

CI/CD, GitOps & Release Management — Jenkins | ArgoCD | Helm | GitHub

- Designed and maintained **20+ Jenkins CI/CD pipelines** for build, deployment, validation, and rollback using **Docker-based build environments**; integrated **SonarQube**, **Trivy**, and **Nexus** for quality gates, image scanning, and artifact traceability.
- Troubleshot Jenkins production issues (**Docker unreachable**, **SonarQube unreachable**, failed builds and deployments), restoring pipelines quickly so releases were not blocked.
- Implemented **GitOps** delivery with Jenkins, **ArgoCD**, **Helm**, and EKS, achieving **fully automated, zero-manual-step deployments** across 4 environments.
- Led migration of **50,000+ production modules** from PVCS to **GitHub**, replacing file-locking with branching and pull requests so developers could work concurrently, **cutting the SDLC cycle from 4 weeks to 3 weeks (~25%)**; set repository governance and branching standards.

Automation, Monitoring & Production Support — Shell | Python | New Relic

- Built a **Shell automation** to sync **62 DB2 tables** across test regions (structure validation, region-specific DEL export/import), **cutting a ~2.5-hour manual process to under 5 minutes (~97%)**.
- Developed **Python health and service dashboards** for every server (JSON status data to HTML pages), so teams could check health without logging into each machine.
- Managed production releases with deployment validation, **New Relic** monitoring, log analysis, and rollback; handled **Linux administration**, incident management, and root cause analysis; managed credentials with **CyberArk** and tracked incidents in **ServiceNow**.

CERTIFICATIONS

- **AWS Certified Cloud Practitioner** (CLF-C02)

EDUCATION

B.Tech, Electronics & Communication Engineering — Kalasalingam Academy of Research and Education | CGPA: 8.3 / 10
